MicroPort® CRM Receives EU Medical Device Regulation (MDR) Approval for ALIZEA™, BOREA™ and CELEA™ Pacemakers Featuring Left Bundle Branch Area Pacing (LBBAP)

MicroPort® CRM, a pioneering company in the field of Cardiac Rhythm management, headquartered in France, announces it has received an expanded labeling for its latest range of implantable pacemakers, ALIZEA™, BOREA™ and CELEA™, for Left Bundle Branch Area Pacing (LBBAP).

ALIZEA™, BOREA™, and CELEA™ pacemakers with Bluetooth® capability have been designed without compromising on size and battery longevity. Their volume is only 11cc and the projected lifespan is 13 years with full feature set on, including remote monitoring. This newest generation of pacemakers also includes the more advanced features developed by MicroPort® CRM, including:

AutoMRI™, which automatically switches in and out of MRI mode upon detection of the magnetic field.

SafeR™, a pacing mode preserving natural AV conduction that effectively reduces unnecessary ventricular pacing.

SAM™, a Sleep Apnea Monitoring feature which reveals a largely under-diagnosed disease with significant cardiac comorbidities such as atrial fibrillation.

These devices offer advanced heart rhythm management features and are equipped with Bluetooth® technology for streamlined remote monitoring. With the SmartView Connect™ mobile remote monitor, patients can be followed by their health care professionals remotely.

"Our latest generation of Bluetooth pacemakers integrates our advanced DNA features developed with the support of physicians over the years, always considering physiological behaviors for patients. It now provides the latest feature with Left Bundle Branch Area Pacing (LBBAP), the most recent approach of physiological pacing. This is a first step in the development of our full LBBAP solution", stated Vincent Leveaux, Vice President of Product Development and Operations at MicroPort® CRM.
