## MicroPort Orthopedic Products Approved for Marketing

MicroPort Orthopedic Products have recently achieved approval by the Shanghai Food and Drug Administration. MicroPort can now commence domestic marketing activities for our new Orthopedic products, including Spine Posterior Fixation System, Anterior Cervical Plate System, Cervical Fusion Device, and Thoracic & Lumbar Fusion Device.

This represents something of a milestone for MicroPort, being the first time our Orthopedic products have gained SFDA approval, and it creates significant opportunity for MicroPort to expand into this growing segment of the Chinese domestic market.

## The 30-Day Follow-Up Result of FIRE2-DIABETES

The 22nd GW-ICC was held at China National Convention Center in Beijing from October 10-16. During the congress, MicroPort organized a satellite meeting on the theme of Firebird2 drug-eluting stents in the treatment of complex lesions in diabetic patients. MicroPort also published the 30-day follow-up result of the FIRE2-DIABETES clinical studies. According to the result of the clinical studies, the success rate was 100% with 100% lesion achievement ratio, 0.3% 30-day cumulative cardiac

death rate. The incidence of TVR, MACE and Late Thrombosis was 0.3%, 0.8% and 0.4% respectively. Meanwhile, the 6-month and 1-year follow-up of the clinical studies are also in process.

FIRE2-DIABETES is the first international multi-center prospective clinical registry research in China, using Cocr drug-eluting stents to treat complex coronary lesion in diabetic patients. All of the implanted stents were Firebird2 Cocr alloyed sirolimus-eluting stents. The findings of the research will provide scientific evidence in the treatment of complex coronary lesion in diabetic patients and further prove the efficacy and safety of Firebird2.

## The Clinical Result of Micro Pulse Infusion Pumps Published

The clinical result of the Micro Pulse Infusion Pump has been published in the <Chinese Journal of Endocrinology and Metabolism>(2011-8). The clinical results, also proved the efficacy of the new product. Developed jointly by Shanghai MicroPort Lifesciences Co., Ltd. and Shanghai Ruijin Hospital, the pulsatile infusion of Gonadotropin-Releasing Hormone (GnRH) is for the treatment of idiopathic hypogonadotropic hypogonadism (IHH). Research and study into pulse therapy began during the 1980's in China and this is the first micro pulse infusion system which can be used for the effective treatment of IHH. It's a small-sized device with

microcomputer-control micro-precision motor for accurate and safe hypodermatoclysis. It is also featured as personalized settings, simple operation and easy to carry.
